○ c.) Try to fix it yourself

10. What is recommended for your safety during the flight?

○ a.) Keep your seat belt fastened

○ b.) Stand up during the flight

○ c.) Use your phone frequently

Transcript

May we have your complete attention as we demonstrate the safety features of this aircraft.
These features may differ from aircraft that you have flown on before.
Please remove headphones for this demonstration.

All emergency exits are indicated by a red exit sign and the flight path markings will guide you to the nearest exit.
In an emergency, the exits are located on both sides of the aircraft, at the front, in the middle, and at the rear of the cabin.
All exits are also shown on the safety card.
The nearest exit may be behind you.

In case of an emergency evacuation, you must leave all your hand baggage behind.
To fasten a seat belt, insert the metal end into the buckle and secure by pulling the loose end.
To open a seat belt, lift the buckle cover.

In case of a loss of cabin pressure, masks like this will drop automatically from the panels above your heads.
Remain seated and pull down firmly on the mask to start the flow of oxygen.
Place the mask over your nose and mouth, secure with the strap, and breathe normally.
Don't worry if the bag does not inflate; oxygen is flowing.
Fit your own mask first before helping anyone else.

The life jackets are stored in a pocket beneath your seat or in the panel above your head.
If it's needed, remove the jacket from its packet and place it over your head.
Bring the strap around your waist, clip at the front, and secure.
To inflate the life jacket, pull down sharply on the red toggle.
There is a mouthpiece for further inflation or deflation and a light to attract attention.
Do not inflate your life jacket until you are outside the aircraft.

Before takeoff, please study the safety card located within the area you are seated, as it includes important safety information specific to this aircraft type.

It is essential that cabin signs and instructions given by the crew are followed.

We would like to remind you that smoking is not permitted anywhere on board.
Your hand baggage must be securely stowed in the overhead locker or under the seat in front of you, and it must not block any aisle or exit.

Now please ensure that your seat belt is securely fastened, tray table folded, armrest down, and window blinds open.
For your safety, we recommend that you keep your seat belt fastened at all times.
Portable electronic devices such as tablets and mobile phones in flight mode may be used throughout the flight.
Please select flight mode now and hold your device securely or place it in a pocket.

If your device or its battery is damaged, hot, produces smoke, is lost, or falls into the seat structure, please inform the cabin crew immediately.
Larger devices, including laptops, must be switched off and stored in your cabin baggage for takeoff and landing.

Thank you for your attention. Please sit back, relax, and enjoy the flight.
